Eman Shujaat	Content Creator	Prepared documentation
Laiba Khurram	Content Creator	Prepared documentation

PROJECT ABSTRACT

Traveling is an essential part of modern life, yet many people struggle with challenges such as identifying the right destinations, managing costs, finding authentic reviews, and connecting with reliable services. The **Travel Smart** website has been developed to provide a convenient and professional platform that simplifies travel planning and enhances the overall journey experience.

The system addresses the problem by offering a user-friendly interface that highlights major features such as curated destinations, detailed testimonials from travellers, a comprehensive feature list of services, and accessible contact options. Each page of the website — including Destinations, Features, Testimonials, About, and Contact — is designed to ensure smooth navigation and clear communication for users.

The project is built using modern web technologies, ensuring responsive design and compatibility across devices. By focusing on simplicity, usability, and efficiency, Travel Smart makes it easier for travellers to make informed decisions, save time, and enjoy a stress-free planning process. In summary, this project demonstrates how smart digital solutions can transform the travel experience, making it not only more affordable and reliable but also memorable for users.

PROBLEM STATEMENT

Planning a trip is often stressful and time-consuming because travelers must gather information from multiple sources, compare destinations, read scattered reviews, and search for reliable contacts. This lack of a centralized and structured platform results in confusion, wasted time, and poor decision-making.

The **Travel Smart** project has been proposed to solve this issue by providing a single, integrated website where users can explore travel destinations, view essential features, read authentic testimonials, and access reliable contact details. The system ensures that travellers have access to accurate, organized, and user-friendly information in one place, making the planning process simpler and more effective.

SUCCESS CRITERIA

The project will be considered successful when:

- Users can easily browse destinations with clear details.
- Features and services are presented in an organized and accessible manner.
- Testimonials provide authentic insights from previous travellers.
- Users can learn about the platform through the "About" page.
- Contact details and inquiry options are easily available.
- The website is responsive, simple to navigate, and works smoothly across devices.

OBJECTIVE & SCOPE

Objective	• Develop a professional travel website that centralizes information about destinations, features, testimonials, and contacts. • Ensure smooth and user-friendly navigation with a responsive design across devices. • Provide authentic and reliable information to assist users in making informed travel decisions. • Present content in a well-structured manner with clear sections such as Destinations, Features, Testimonials, About, and Contact. • Create a foundation that can be expanded in the future with additional smart travel tools and services.
In Scope	• Static and responsive website with 5 main pages: Destinations, Features, Testimonials, About, and Contact. • Basic UI/UX with simple navigation and mobile-friendly design. • Information display with text, images, and structured sections. • Contact page with form and details for easy communication. • Testimonials page to display user feedback.
Out Scope	• Online booking and reservation system. • Payment gateway integration for travel services. • AI-powered personalized recommendations. • Real-time data integration (e.g., live ticket prices, weather updates). • Mobile application version of Travel Smart.

4.1 FUNCTIONAL REQUIREMENTS

ID	Requirement	Priority	Source	Status
FR-01	The system must allow users to view different travel destinations with details and images.	Must	Sir/Client	Implemented
FR-02	The system must provide a Features page highlighting key offerings of the website.	Must	Sir/Client	Implemented
FR-03	The system must display Testimonials from users/travelers to build credibility.	Must	Sir/Client	Implemented
FR-04	The system must include an About page explaining the platform's purpose.	Must	Sir/Client	Implemented
FR-05	The system must provide a Contact page with a form and contact details.	Must	Sir/Client	Implemented
FR-06	The system should be responsive and work across desktop and mobile devices.	Should	Sir/Client	Implemented
FR-07	The system could include a search or filter option for destinations.	Could	Team	Planned
FR-08	The system could allow storing testimonials dynamically via a backend.	Could	Team	Planned
FR-09	The system won't include online booking or payment integration in this version.	Won't	Sir/Client	Not Planned

4.2 NON-FUNCTIONAL REQUIREMENTS(NFR)

ID	Category	Statement	Metric/Target
NFR-01	Performance	The website should load quickly on standard connections.	Average page load time < 2 seconds
NFR-02	Usability	Navigation should be simple, clear, and consistent across all pages.	Users should reach any page in ≤ 3 clicks
NFR-03	Security	User inputs (contact form) must be validated to prevent errors or spam.	Form validation with no blank/invalid entries
NFR-04	Compatibility	The system should run smoothly on major browsers and devices.	Chrome, Firefox, Edge, Safari; Desktop + Mobile
NFR-05	Reliability	Website content should remain accessible during presentations/demos.	99% availability during demo period
NFR-06	Maintainability	Code should be structured and documented for easy updates.	Clean folder structure + comments

4.3 CONSTRAINTS & ASSUMPTIONS

Constraints: -

- The project must be completed and submitted within the **given academic deadline**.
- Development was limited to a **small team size**, with fixed roles and responsibilities.
- The website is hosted locally or on free hosting platforms (e.g., GitHub Pages), with **limited server resources**.
- No backend integration (database or booking system) was allowed in the current scope.
- Project had to strictly follow the **formatting and documentation rules** provided by the instructor (TechWiz guidelines).

Assumptions: -

- Users will have access to a **stable internet connection** to browse the website.
- The website will be accessed from both **desktop and mobile devices** with modern browsers.
- Users are expected to understand basic web navigation (menus, links, forms).
- Testimonials provided are assumed to be **authentic and accurate**.
- Future enhancements (like booking or payments) can be integrated without major redesign of the current system.

STAKEHOLDERS & USERS

Primary Users	Travel Enthusiasts who want to explore destinations, packages, and activities. Students & Researchers looking for information about different cultures and travel options. General Visitors seeking inspiration, travel tips, and accommodation details.
Secondary Users	Travel Agencies / Service Providers who may use the website for marketing their tours and accommodations. Local Businesses (hotels, transport providers, restaurants) who could benefit from visibility. Content Creators / Reviewers who provide testimonials and feedback.
Stakeholders	Supervisor / Instructor – Evaluates the project against requirements. Evaluators / Academic Panel – Assess functionality, documentation, and originality. Team Members – Responsible for development, design, and testing. Future Clients / End Users – Potential users if the project is extended into a real-world platform.

System Use Case – Travel Smart

Actors

- **Visitor** – Any user browsing the website (no login required).
- **Admin** – (Limited in this project scope; mainly manages content in JSON/TXT).
- **Reviewer** – A visitor who submits testimonials/feedback.

UC ID	Name	Actors	Brief
UC-01	Search Destination	Visitor	User searches for a travel destination or package by keyword.
UC-02	View Tour Package	Visitor	User views detailed information of a selected package (images, activities, accommodations, transport options).
UC-03	Submit Feedback	Reviewer	User submits a feedback form to share experience or suggestions.
UC-04	View Testimonials	Visitor	User reads testimonials shared by other travelers.
UC-05	Contact Website	Visitor	User accesses Contact Us page to view email/phone or GPS location.

SYSTEM ARCHITECTURE

Layer	Technology
Frontend	HTML, CSS, Bootstrap, JavaScript, jQuery
Backend	Not implemented (static website only)
Database	Not applicable (no storage used in current scope)
Hosting/Deployment	Localhost / GitHub Pages / Free hosting platforms

DETAILED USE CASE

- **UC-01: Search Destination**
- **Pre-conditions:** User is on the homepage or destinations page.
- **Basic Flow:**
 1. User enters keyword in the search bar.
 2. System filters the trip catalog based on keyword match.
 3. Matching destinations/packages are displayed.
- **Alternate Flow / Exceptions:**
 - If no match is found, system shows “No results found.”
- **Post-conditions:** User views list of matching destinations.

UC-02: View Tour Package

- **Pre-conditions:** Destinations page is loaded.
- **Basic Flow:**
 1. User selects a package from the catalog.
 2. System displays detailed package information (images, description, price, transport, accommodation).
- **Alternate Flow / Exceptions:**
 - If package details fail to load (e.g., missing JSON data), show error message.
- **Post-conditions:** User can explore package details and plan accordingly.

UC-03: Submit Feedback

- **Pre-conditions:** User navigates to Feedback page.
- **Basic Flow:**
 1. User fills in feedback form (name, email, message).
 2. User submits the form.
 3. System displays “Thank you for your feedback.”
- **Alternate Flow / Exceptions:**
 - If required fields are empty, system prompts user to complete them.
- **Post-conditions:** User’s feedback is acknowledged (but not stored, per constraints)

HIGH-LEVEL SYSTEM ARCHITECTURE DIAGRAM

- User interacts directly with the **frontend pages** (Destinations, Features, Testimonials, About, Contact).
- No backend/database layer exists in this version.
- Hosting can be done on **free static hosting services** like GitHub Pages.

DATABASE DESIGN

- 8.1 Entity–Relationship (ER)

Note: Current implementation is **static (no backend/database)**. Therefore, no live ERD exists.

☞ However, a **future extension** of the project may include a relational database to handle users, destinations, bookings, and feedback.

Table	Key Fields	Purpose
users	id (PK), name, email, password	User authentication & profile
destinations	id (PK), name, location, description, price	Store travel destinations & details
accommodations	id (PK), destination_id (FK), type, rating, amenities	Hotels/hostels linked to destinations
transport	id (PK), destination_id (FK), type, cost, duration	Transport options (flight, train, bus, car rental)
feedback	id (PK), user_id (FK), destination_id (FK), comments, rating	User reviews & ratings

8.2 DATA SOURCE ASSUMPTIONS

For this project, no database has been implemented. Instead:

- Data is displayed using **JSON/TXT files**.
- Users can view but not update or store data.
- This design allows for **future scalability**,
where JSON/TXT structures can be migrated to a relational database such as MySQL or PostgreSQL.

9.1 DESIGN PRINCIPLES

- **Minimal** → Clean layout, no clutter, focus on essential information.
- **Accessible** → Legible fonts, clear contrast, easy navigation for all users.
- **Responsive** → Works seamlessly on desktop, tablet, and mobile screens.
- **Consistency** → Common header, footer, and design elements across all pages.
- **User-Centred** → Simple menus, easy-to-find destinations, smooth flow.

9.2 COLOUR PALETTE & TYPOGRAPHY

Colours:

- Primary: purple (#1E88E5) → Travel, trust, openness
- Secondary: White (#FFFFFF) → Simplicity, readability

Typography:

- Headings: *Poppins* (bold, modern, professional)
- Body Text: *Open Sans* (clean, easy to read)

9.3 WIREFRAMES / MOCKUPS

Page	Purpose	Key Components
Home	Entry point, overview of Travel Smart	Navbar, Hero Banner (image/text), Quick Links (Destinations/Features), Footer
Destinations	Showcase tours & travel spots	Destination cards, Images, Price info, Filters/Sorting
Features	Highlight unique travel services	Package tours, Accommodation, Transport options
Testimonials	Build trust with user reviews	Reviews carousel, Ratings, Quotes
About	Introduce project/mission	Company intro, Mission/vision, Team info
Contact	Allow users to reach creators	Contact form, Email/Phone, Map or Geolocation, Social media icons

9.4 WEBSITE PAGES OVERVIEW

9.5 WEBSITE WALKTHROUGH & NAVIGATION FLOW

10.1 MODULES & FEATURES

Module	Description	Linked FR
M-01: Home Page	Displays hero section, highlights, and quick navigation to main sections.	FR-01 (Trip Catalog overview)
M-02: Destinations Page	Shows travel destinations with details: description, price, gallery, activities, accommodations, and transport. Includes sorting & search options.	FR-02 (Trip Catalog, Sorting, Search)
M-03: Features Page	Lists travel services (tours, accommodations, transport options) with static JSON/TXT-based data.	FR-03 (Feature Display)
M-04: Testimonials Page	Displays traveler feedback and ratings in a carousel format.	FR-04 (Package Tour Review – read only)
M-05: About Page	Provides information about Travel Smart: mission, goals, and values.	FR-05 (About Us)
M-06: Contact Page	Provides contact form, email, phone details, and geolocation/social media integration.	FR-06 (Feedback & Contact)
M-07: Navigation & Sitemap	Ensures smooth navigation across pages and shows a site structure for clarity.	FR-07 (Search & Navigation, Sitemap)

10.2 KEY CODE / DESIGN NOTES

Responsive Design: Implemented using **Bootstrap grid system** (rows/columns) and **CSS media queries**.

Dynamic Data: Some sections (e.g., Destinations, Features) fetch data from **JSON/TXT files** instead of a database (due to project constraints).

Sorting & Filtering: Implemented using **JavaScript functions** to re-arrange destination cards based on criteria (price, popularity, alphabet).

Interactivity: jQuery used for carousel sliders, animations, and event handling (like form validation).

Geolocation: Contact page integrates **HTML5 Geolocation API** (optional) to show user's location or nearby map.

Single-Page-App feel: Though multi-page, smooth navigation and minimal reloads provide SPA-like user experience.

11.1 TESTING STRATEGY

The testing approach for *Travel Smart* was primarily manual testing, conducted across different browsers (Chrome, Edge, Firefox) and devices (desktop, tablet, mobile).

Focus areas included:

- **Approach:** Manual testing across all implemented features.
- **Browsers Covered:** Chrome, Firefox, Microsoft Edge.
- **Devices Covered:** Desktop (Windows 10/11), Mobile (Android), Tablet (iOS/Android).
- **Optional:** Automated test cases (e.g., Selenium, Cypress) can be added in future phases.

11.2 TEST CASES

TC ID	Scenario	Steps	Expected	Actual	Status
TC-01	Verify homepage loads	Open website in browser	Homepage with navbar, hero, sections visible	As expected	Pass
TC-02	Check navigation links	Click on each navbar link (Destinations, Features, Testimonials, About, Contact)	Correct page loads without errors	As expected	Pass
TC-03	Search destinations	Type keyword in search bar (e.g., "Paris")	Matching destination card(s) displayed	As expected	Pass
TC-04	Sort by price	Select sort option "Price: Low to High"	Destination cards rearranged correctly	As expected	Pass
TC-05	Submit contact form	Fill details & click submit	Success message displayed	As expected	Pass
TC-06	Responsive layout	Open website on mobile browser	Layout adapts (no overlap, readable)	As expected	Pass
TC-07	Testimonials carousel	Scroll through reviews	Testimonials rotate smoothly	As expected	Pass
TC-08	Geolocation (Contact page)	Allow location access	Location/map visible	As expected	Pass

11.3 BUG LOG

ID	Title	Severity	Status	Fix
B-01	Destination images not scaling properly on mobile	Medium	Resolved	Added responsive CSS classes
B-02	Contact form not validating email	High	Resolved	Added regex-based validation in JS
B-03	Sorting not working on first click	Low	Resolved	Fixed event listener in JS
B-04	Navbar overlapping hero text on smaller screens	Medium	Resolved	Adjusted Bootstrap breakpoints

12.1 DEPLOYMENT & INSTALLATION

- **How to Run Locally**
 - **Prerequisites:**
 - Any modern browser (Google Chrome, Firefox, Microsoft Edge).
 - A simple local server (optional but recommended) e.g., **VS Code Live Server Extension** or Python's HTTP server.
 - **Steps:**
6. Download the project folder (contains all HTML, CSS, JS, and assets).
 7. Open the folder in **Visual Studio Code** (or any IDE).
 8. If using Live Server:
 - Right-click index.html → **Open with Live Server**.
 - Website will open at `http://localhost:5500/`.
 9. If using Python server:
 - Run command: `python -m http.server 8000`.
 - Open browser at `http://localhost:8000/`.
 10. Alternatively, double-clicking index.html will also open the site, but some features (like JSON fetch) may not work without a local server.

12.2 DEPLOYMENT

Option 1: GitHub Pages

- Push project to GitHub repository.
- Go to repo settings → **Pages** → choose branch (main) + /root.
- Website will be live at <https://username.github.io/project-name/>.

Option 2: Netlify

- Drag & drop project folder into **Netlify dashboard**.
- Instant deployment with free HTTPS + custom domain.

Option 3: Local Server (Class Demo)

- Run locally on laptop during presentation with Live Server.

12.3 ENVIRONMENT DETAILS

- **Frontend:** HTML5, CSS3, JavaScript (ES6+), Bootstrap 5.3, jQuery 3.x
- **Backend:** None (static project)
- **Database:** None (future enhancement: MySQL/Firebase integration)
- **IDE:** Visual Studio Code (recommended)
- **Version Control:** Git/GitHub (optional)
- **Hosting Tested On:** GitHub Pages, Localhost

USER GUIDE (QUICK START)

13.1 Navigation:

- The website is divided into six main pages:
 1. Home – Overview, hero banner, and quick links.
 2. Destinations – Explore travel destinations with details, filtering, and sorting.
 3. Features – Learn about services like transport, accommodation, and activities.
 4. Testimonials – Read feedback and experiences from other travelers.
 5. About – Understand the vision, mission, and purpose of Travel Smart.
 6. Contact – Get in touch via form, email, phone, or social media links.
- Use the top navigation bar (navbar) to switch between pages.
- A footer menu also provides important links for quick access.

13.2 Using Features (Step-by-Step)

13.2 Using Features (Step-by-Step):

Search Destinations:

- Go to *Destinations Page*.
- Enter a keyword (e.g., “Paris” or “Beach”) in the search bar.
- Results update instantly with matching options.

Filter & Sort:

- Use dropdowns to filter by destination type (city, beach, mountain) or budget.
- Sorting options allow arranging by price or popularity.

View Features:

- On the *Features Page*, browse through services like transport options, tour packages, and hotel accommodations.

Read Testimonials:

- Open the *Testimonials Page* to view traveler reviews.
- Carousel navigation lets you scroll through different testimonials.

Learn About Us:

- On the *About Page*, read the mission and background of Travel Smart.

Contact & Support:

- Open the *Contact Page*.
- Fill in the Contact Form with name, email, and message → click Submit.
- View Map/Geolocation and connect via social media icons.

13.3 Contact / Support

Email: travelsmart@example.com

Phone: +92-XXX-XXXXXXX

Social Media: Facebook, Instagram (links available in footer & contact page).

Form Support: Queries submitted through the contact form will be handled by the support team (response within 24–48 hrs).

14.1 REQUIREMENT COVERAGE MATRIX

Requirement ID	Description	Status
FR-01	Home page with hero + navigation	✓ Implemented
FR-02	Destinations with search & sorting	✓ Implemented
FR-03	Features page (services showcase)	✓ Implemented
FR-04	Testimonials section (carousel)	✓ Implemented
FR-05	About page (mission & vision)	✓ Implemented
FR-06	Contact page with form & social links	✓ Implemented
FR-07	Navigation & sitemap	✓ Implemented
NFR-01	Performance – Page loads under 2 seconds	✓ Achieved
NFR-02	Usability – Clear, consistent navigation	✓ Achieved
NFR-03	Security – Basic input validation (form)	✓ Achieved

14.2 PERFORMANCE & USABILITY NOTES

- **Performance:** All pages tested on Chrome & Firefox. Average load time < **2 seconds** (due to lightweight HTML/CSS/JS, no backend).
- **Usability:**
 - Navbar present on all pages, ensuring **easy navigation**.
 - Buttons, filters, and forms tested for responsiveness.
 - Works on desktop, tablet, and mobile screens (Bootstrap responsive grid).

14.3 ACCESSIBILITY CHECKS

- **Alt Text:** All images include **alt attributes** for screen readers.
- **Color Contrast:** Checked against WCAG standards — text is readable on backgrounds.
- **Forms:** Contact form labels are descriptive and accessible.
- **Keyboard Navigation:** Pages can be navigated using **Tab/Enter keys**.

15.1 PROJECT MANAGEMENT

Week	Milestones / Tasks	Deliverables / Notes
Week 1	Requirement Gathering & Finalization	Problem Statement, Features List, User Stories documented
Week 2	UI/UX Design & Wireframes	Wireframes for Home, Destinations, Features, About, Contact pages
Week 3	Frontend Development (HTML, CSS, JS)	Homepage + Destinations page structure
Week 4	Frontend Development (Remaining Pages)	Features, Testimonials, About, Contact page
Week 5	Testing & Debugging	Manual test cases executed, bugs logged and fixed
Week 6	Documentation & Final Submission	Final report, presentation slides, project video, viva prep

15.2 RACI MATRIX (ROLES & RESPONSIBILITIES)

Task	Responsible (R)	Accountable (A)	Consulted (C)	Informed (I)
Requirement Finalization	Abdul Rehman	Sir Tasbeel	All Team Members	Sir Tasbeel
UI/UX Design	Laiba, Eman	Abdul Rehman	Umer	Sir Tasbeel
Development (Frontend)	Umer, Abdul Rehman	sir Tasbeel	sir Tasbeel	sir Tasbeel
Development (Backend / Data)	Umer, Abdul Rehman	sir Tasbeel	sir Tasbeel	sir Tasbeel
Testing	Umer, Abdul Rehman	Abdul rehman	sir Tasbeel	sir Tasbeel
Documentation	Laiba, Eman	sir Tasbeel	All Team Members	sir Tasbeel

16. RISKS & MITIGATIONS

Risk	Likelihood	Impact	Mitigation Strategy
Tight deadline	Medium	High	Early requirements freeze, strict scope control, weekly progress tracking
Browser compatibility issues	Medium	Medium	Perform cross-browser testing (Chrome, Firefox, Edge, Safari)
Responsive design breaks on mobile	High	Medium	Test on multiple devices, use Bootstrap grid properly
Team coordination gaps	Medium	High	Weekly team meetings, task tracking (Trello/WhatsApp group)
Data loss (code overwrite)	Low	High	Regular backups, use GitHub/Drive for version control
Limited technical skills	Medium	Medium	Online tutorials, peer support, supervisor guidance
Submission format errors	Low	Medium	Follow TeckWiz formatting rules strictly, final checklist review

17. FUTURE WORK

Although the current version of the website meets the core requirements (Destinations, Features, Testimonials, About, Contact), several enhancements can be implemented in the future:

1. Backend Integration – Add a server-side backend (e.g., Node.js, PHP, or Python Flask/Django) to support dynamic content.
2. Database Connectivity – Store user feedback, contact form submissions, and destination details in a database (MySQL/Firebase).
3. User Authentication – Provide login/signup functionality for personalized experiences such as saved destinations.
4. Advanced Search & Filtering – Improve the Destinations page with filters (budget, region, activity type).
5. Booking/Reservation System – Enable users to book packages, hotels, or tours directly.
6. Testimonials with Media – Allow customers to submit reviews with photos/videos.
7. Multilingual Support – Add multiple language options for international travellers.
8. Mobile App Version – Extend the website as a hybrid mobile app for Android/iOS.
9. AI Recommendations – Suggest personalized travel plans using AI-based recommendations.
10. Payment Gateway Integration – Secure online payments for bookings.

Note: These features are planned for future iterations to enhance user experience, interactivity, and scalability.

ACKNOWLEDGMENT

We would like to extend our sincere gratitude to our mentor Sir Tasbeel for his invaluable guidance, constructive feedback, and continuous encouragement throughout the development of this project. His support has been instrumental in shaping our ideas and ensuring the successful completion of this work.

We are also thankful to our institution and faculty members for providing the necessary resources, technical knowledge, and a collaborative environment that enabled us to work effectively as a team.

Finally, we acknowledge the efforts of our team members, whose dedication, cooperation, and sense of responsibility made this project possible. Their contributions reflect true teamwork and commitment.
